

Time Series Database Interface: TSfame Extensions

August 14, 2012

I no longer have access to Fame so package *TSfame* is no longer being extensively tested. Please contact the package maintainer (Paul Gilbert) if you have Fame and are willing to test this package.

1 Introduction

The package *TSfame* provides methods for generics in the package *TSdbi*. A complete vignette, illustrating the general functionality of all *TSdbi* extension packages is provided in the vignette with package *TSdata*. Installing that package requires that most of the *TS** packages are available, which will not be necessary for most users, so it may be easier to get the pdf version of the vignette from CRAN at <http://cran.r-project.org/web/packages/TSdata/index.html>.
